AOS AWARDED GENERAL SERVICES ADMINISTRATION (GSA) INFORMATION TECHNOLOGY (IT) SCHEDULE CONTRACT

Dallas, Texas, June 5, 2003 – The General Service Administration (GSA) has awarded AOS, Inc. a five-year contract for Information Technology (IT) products and services under the Group 70 Federal Supply Schedule. The GSA Schedule award gives federal, state, and local government agencies streamlined and simplified access to AOS’s innovative secure and mobile communications solutions and airtime services.

GSA IT Schedule contracts are awarded by the General Services Administration’s IT Acquisition Center, which certifies that the prices a company has awarded on schedule are fair and reasonable for sale to any government agency. The goal of the GSA Schedules program is to provide an easy and cost effective procurement method for federal, state, and local Government agencies. These agencies can purchase directly from GSA Schedule holders using simplified acquisition procedures, and are not required to follow additional competition requirements.

Included in the contract are AOS acclaimed Outpost Communicator™ products, which provide lightweight, mobile and immediate broadband connectivity via Inmarsat satellite networks at speeds of up to 512 Kbps, as well as AOS Scrunch™ image compression software, and a broad range of Inmarsat airtime services.

“Although we’ve been providing our technology and airtime solutions to the Government since our beginnings in 1988, the GSA schedule greatly simplifies and broadens access to our products and services for all Government users” said Alan Then, Director of Operations for AOS. “With the tremendous interest we’ve seen in our solutions, this was a natural next step in reaching new customers in the Government arena.”

The AOS GSA Schedule (contract number GS-35F-0675N) is valid through June 2008. For additional information on AOS’s products or GSA Schedule, please call 972-735-0101 or e-mail info@aosusa.com

Founded in 1988, **AOS, Inc.** is a multi-vendor, turnkey systems provider offering a broad range of communications and security products, specializing in rapid deployment and emergency response solutions for a worldwide customer base. The company designs, develops, integrates, assembles and tests its own products under the most rigid international standards.
